Operator training manual for two wheel tractor and ancillary equipment

Abstract:

The term “mechanization” is used to describe tools, implements and machinery applied to improve the productivity of farm labour and of land including off farm activities (logistic, handling and processing). Mechanization covers broadly the entire process of on and off farm. It may use either human, animal or motorized power, or a combination of these. In practice, therefore, it involves the provision and use of all forms of power sources and mechanical assistance to agriculture, from simple hand tools, to draught animal power and to mechanical power technologies.
